“For where your treasure is, there also is your heart.”

Mathew 6:21

Pastor's Corner

Dear Parishioners and Visitors,

Believing that the Eucharist is truly the Body, Blood, Soul and Divinity of our Lord, Jesus Christ, can be difficult, even for some Catholics. In order to strengthen our faith in the Real Presence God has blessed us with many Eucharistic Miracles throughout the history of the Church. Let's learn about some of them as we celebrate Eucharistic Revival in our Church in America.

(Part 3) Sokolka, Poland. At the beginning of January of 2009 the Curia of Białystok asked two eminent specialists in pathological anatomy of the Medical University of Białystok - Professor Maria Elżbieta Sobaniec-Łotowska and Professor Stanisław Sulkowski, to analyze the samples of the bloodstained Host. On January 7 - Professor Sobaniec-Łotowska went to Sokółka and took from the corporal a minuscule sample of the mysterious substance present in the Host.

The professors of the UMB University had underlined that, in the case of the examined Host, in the sample they have found numerous biomorphological indicators typical of cardiac muscle tissue such as, for example, the phenomenon of segmentation, namely damage to the fibers of the tissue of the cardiac muscle in the section where communicating junctions [structures characteristic of the cardiac muscle] are found, and the phenomenon of fragmentation. Such damages are visible in the form of numerous small lesions. These alterations can be observed only in fibers that were not necrotic, that is alive and show signs of the fast spasms of the cardiac muscle typical of the extreme phase preceding death. Another important evidence of the fact that the material analyzed corresponded to human cardiac muscle tissue was the central position of the cellular nucleus in the observed fibers, a typical characteristic of cardiac muscle fibers... The two scientists of Białystok declared... *“Some signs that can correspond to nodes of the contractions have been observed on the section of several fibers. Instead, during the analysis with the electronic microscope, the outlines of the communicating junctions and the thin filaments of the myofibrils were visible”.* Viva Cristo Rey!
